

International Light Technologies announces release of new product for Gas Stations, the [CanopyLight LED Retrofit Kit](#)

Peabody, MA, Issued August 22, 2011..... International Light Technologies (ILT), a leading designer, manufacturer and distributor of lighting products and equipment, today announced the release of a new product, the ILT CanopyLight™ LED Retrofit Kit.

The CanopyLight LED Retrofit Kit is an energy efficient, high-brightness, long life LED retrofit module that replaces traditional metal halide light fixtures in gas pump canopies at gas stations and convenience stores. The engineering team at ILT was able to design a retrofit kit that easily converts the existing canopy metal halide light fixture, eliminating the need to cut the canopy during installation and avoiding potential roof leaks common with other canopy light retrofit procedures.

The CanopyLight LED Retrofit Kit is designed to significantly reduce energy consumption and provide a long life span that reduces maintenance costs. It also provides better lighting characteristics with brighter light focused on gas pumps and fueling areas offering a better experience and safety for customers.

The ILT CanopyLight Retrofit Kit qualifies for utility rebates in many states.

“In providing the convenience store market with cost efficient LED refrigerated case lighting (CaseLight™) we realized there was a real need for energy efficiency in gasoline pump canopies,” said Thom Connolly, President and CEO of International Light Technologies. “Our engineering team looked at the easiest and most cost effective way to retrofit the canopies with LED lighting and we are now launching the CanopyLight LED Retrofit Kit to great customer reviews. The energy rebates also enable gas stations to take advantage of the cost savings.”

About International Light Technologies

International Light Technologies was created in 2005 with the merger of Gilway Technical Lamp and International Light. International Light Technologies Sources Division combines 45 years of expertise in providing customers with off-the-shelf and customized solutions across a broad spectrum of light sources, including high power LEDs and modules, UV-Visible-IR lamps, specialized replacement lamps, and power supplies. Through the Systems Division, the company has been solving light measurement problems through the design and manufacture of a wide range of highly accurate light measuring instruments. The LED Innovations Division brings together the expertise of both divisions to design and manufacture LED-based products including under cabinet and task lighting, refrigerated/freezer display case lighting, gasoline pump canopy lighting, as well as a complete line of LED modules for signage lighting.
